

CONTENTS

Tables.....	2
Figures	3
Acknowledgements.....	3
1 CAPTURE	4
Section highlights	5
1.1 Introduction.....	5
1.2 Cost components of currently available capture technologies.....	7
1.3 Overview of capture development efforts to drive down costs.....	9
1.4 Current pilot-scale testing of 2 nd generation technologies	17
2 TRANSPORT	24
Section highlights	25
2.1 Introduction.....	25
2.2 International standards for CO ₂ pipelines.....	27
2.3 CO ₂ transport R&D activities	31
3 STORAGE	36
Section highlights	37
3.1 Introduction.....	37
3.2 Subsurface characterisation for storage resource assessment.....	38
3.3 Storage resource classification schemes and methods	41
3.4 Current status of regional assessments	44
3.5 Matched capacity and source-sink considerations.....	50
References	54
Reference listing of applicable International Standards and Codes to CO ₂ transport.....	62
Abbreviations and acronyms	63

TABLES

Table 1.1	Energy penalties introduced by CO ₂ capture systems in power plants ..	8
Table 1.2	2 nd generation capture technologies being tested at 0.5 MW _e (10 t/d) scale or larger	19
Table 3.1	Example screening criteria for storage in deep saline formations	39
Table 3.2	Characteristics of oil reservoirs suitable for miscible CO ₂ -EOR	41
Table 3.3	Selected resource assessments from the Americas region	44
Table 3.4	Summary of selected European multinational resource assessments	46
Table 3.5	Asian Development Bank estimated theoretical storage resources...	48
Table 3.6	Progress on storage assessments in selected countries in the Asia Pacific region	48
Table 3.7	Selected key estimates of effective storage resources.....	51

FIGURES

Figure 1.1	Relative increases in capital cost and LCOE introduced by a capture system – US experience	8
Figure 1.2	Relative US DOE cost reduction targets and timing for 2 nd generation and transformational carbon capture technologies	10
Figure 1.3	Generalised approach for meeting capture cost technologies	11
Figure 1.4	Pathway of carbon capture technology development.....	16
Figure 1.5	Generalised development timelines for 2 nd generation and transformational capture technologies	18
Figure 2.1	Onshore CO ₂ transportation – pipeline construction	26
Figure 3.1	(a) CSLF Techno-Economic Resource-Reserve pyramid, (b) storage classification schemes of IEA GHG, (c) schemes of Frailey and Finley ..	42
Figure 3.2	Geographical coverage of storage resource assessments	52

ACKNOWLEDGEMENTS

Capture

Principal contributors to the Capture section of this volume of the *Global Status of CCS: 2015* report were **Ron Munson** (Principal Manager Capture, Global CCS Institute), **Guido Magneschi** (Senior Adviser Carbon Capture, Global CCS Institute) and **Dr Tony Zhang** (Senior Adviser Carbon Capture, Global CCS Institute).

Parties from outside of the Global CCS Institute that reviewed and provided comment on the Capture section of this volume of the *Global Status of CCS: 2015* report were **John Marano** – JM Energy Consulting Inc., **Earl Goetheer** – TNO and **Paul Feron** – CSIRO.

Transport

The Transport section of this volume of the *Global Status of CCS: 2015* report was prepared by Energy Pipelines CRC with the principal authors being **Dr Klaas van Alphen** and **Professor Valerie Linton**.

Storage

Principal contributors to the Storage section of this volume of the *Global Status of CCS: 2015* report were **Neil Wildgust** (Principal Manager Storage, Global CCS Institute), **Dr Chris Consoli** (Senior Adviser Storage, Global CCS Institute) and **Benjamin Court** (Senior Adviser Storage, Global CCS Institute).

Parties from outside of the Global CCS Institute that reviewed and provided comment on the Storage section of this volume of the *Global Status of CCS: 2015* report were **Owain Tucker**, **Chris Rathbun** and **Xudong Jing** – Shell, **Stefan Bachu** – Alberta Innovates Technology Futures, **Wes Peck** – Energy and Environment Research Centre and **Isabelle Czernichowski** and **Ton Wildenborg** – CO₂GeoNet.
