# Permitting CCS projects

## Experiences and lessons learned

Olafr Røsnes  
Principal Consultant  
Det Norske Veritas (DNV)

Directorate-General  
for Energy

10 May 2011

A year of knowledge sharing: Sowing the first seeds

# Outline of presentation

- ✎ Experiences and lessons learned from the Network, Olafr Røsnes, DNV
- ✎ How to obtain the necessary permits? Experiences from the ROAD project, Hans Schoenmakers

# 👋 Permits for a CCS project

Power Plant

Permit to construct and operate power plant  
 Permit to modify existing plant  
 Environmental Permits  
 Water abstraction license

Capture Plant

Building permit capture plant  
 Environmental Impact Assessment  
 Environmental Permits

Transport

Assessment of pipeline routing  
 Consents from landowners  
 Pipeline Works Authorisation

Storage

Exploration permit  
 Drilling permits  
 Environmental Impact Assessment  
 Storage permit  
 Consents from land owners

Is the project of national significance?

# **Current status of CCS regulatory framework**

- ✎ The legal and regulatory framework for CCS projects is under development
  - ✎ Transposition of Directive 2009/31/EC in Member States
- ✎ The Network member projects are the first CCS projects to be regulated by the new regulatory framework
- ✎ Building CCS specific regulatory competence among both project developers and regulators

## **Current status of permitting CCS demonstration projects**

- ✎ The CCS Demonstration projects are in the early permitting stages
- ✎ Projects are currently moving forward with the permitting process preparing applications for permits and consents
- ✎ The project developers have experience with permitting from other major infrastructure projects

# Country and project specific issues

## Differences

- ✎ Onshore vs offshore storage influences public awareness/acceptance
- ✎ Levels of government
- ✎ Differences in legal and regulatory traditions

## Similarities

- ✎ Government supporting CCS
- ✎ EU legislation
- ✎ Competent and experienced project developers

## Lessons learned so far: general process

- ✎ Understand the planning and permitting process as early as possible
  - ✎ Permitting Plan
- ✎ Based on experience from other infrastructure projects: Prepare for a longer permitting process than initially planned
- ✎ Other major infrastructure projects may influence the permitting process

## Lessons learned so far: consultations (1/2)

- ✎ Ensure that all potential stakeholders are heard and communicated with
- ✎ Local communities should be properly consulted early in the process
  - ✎ Identify and communicate benefits
- ✎ Ensure that all aspects of the project are communicated (holistic approach) – a project is more than technology

## Lessons learned so far: consultations (2/2)

- ✎ Prepare and present alternative options to stakeholders early in the project
- ✎ Analyse previous public acceptance issues locally, regionally and nationally
- ✎ Involve politicians, experts and local communities in information campaigns

## **Lessons learned so far: interaction regulators and project developers**

- ✎ Open communication with regulators as early as possible
- ✎ Build regulatory competence in the CCS project organisation
- ✎ Keep attention to elections – heated political debates may influence the permitting
- ✎ Communicate that CCS is a joint European action with EC, Member States, industry and other stakeholders

## Permitting process moving forward in 2011 (1/2)

Areas where project developers will gain more experience

- ✎ Preparing the necessary applications and supporting documents
  - ✎ Level of detail in documentation
- ✎ Cooperation with the regulators
  - ✎ Risk acceptance criteria
- ✎ Consultation with stakeholders
- ✎ Interaction between public engagement and permitting

## Permitting process moving forward in 2011 (2/2)

### Developments in the regulatory framework

- ✎ Continued process of building experience among regulators
- ✎ Regulators to accommodate the project developers need for an efficient permitting process to meet the target of start-up by the end of 2015.

 **Thank you for your attention**
